PROFESSIONAL SUMMARY

Software engineer and IT admin with 4+ years at Brighture Inc., handling everything from server infrastructure to client-facing apps. I work across the full stack — Flutter for mobile, React.js for web, FastAPI on the backend, and Linux/cloud for deployment. I've maintained production servers, shipped a full web and mobile app for a client, and kept systems running securely day-to-day. I like solving real problems end-to-end.

TECHNICAL SKILLS

Mobile	Flutter (Dart), cross-platform iOS & Android, Face ID / Touch ID biometric auth, QR code generation, JWT session management, flutter_secure_storage
Web	React.js (JSX), single-page applications, Stripe Connect integration, REST API integration, portal maintenance
Backend	Python / FastAPI, RESTful API design, JWT authentication, bcrypt, AES-128-CBC field-level encryption, Supabase (PostgreSQL)
Cloud & DevOps	Docker, Google Cloud Run, Firebase, Supabase, Codemagic CI/CD, GitHub, VPS management
Servers & Infra	Linux (Ubuntu/Debian/CentOS), Nginx, Apache, UFW firewall, Fail2ban, SSH, SSL/TLS, Mikrotik networking
Security	End-to-end encrypted auth, biometric authentication, RBAC, AES encryption for PII, SSH key management, server hardening, security patching
Scripting	Bash scripting, Google Sheets automation, data reporting & inventory management
IT Support	macOS, Windows, iPad/iOS device management, MDM, end-user training, remote troubleshooting

WORK EXPERIENCE

Software Engineer / IT Personnel

Nov 2021 – Present

Brighture Inc. — Cebu, Central Visayas, Philippines

- Maintained the company's multi-service web platform (Vue/Quasar, Django, Wagtail, PHP) — fixed bugs, shipped new features, and kept staging, sandbox, and production environments stable under daily use.
- Managed Linux servers running Nginx and Apache — updates, config changes, and security patches planned around uptime.
- Kept servers locked down with UFW firewall rules, per-IP SSH key access, Fail2ban, and SSL certificates.
- Set up and migrated VPS servers, managed Docker containers, and monitored system health with Prometheus, Grafana, and Loki.
- Handled Git workflows — branch management, merging fixes to master, and coordinating releases with the dev team.
- Set up and maintained Mikrotik network systems for a remote ESL office; ran weekly check-ins with remote teachers to keep online classes running without interruption.
- Handled day-to-day IT operations — device management (MacBooks, iPads, Windows), MDM, software updates, and staff support.
- Built weekly teacher performance reports in Google Sheets and automated parts of inventory tracking.

CLIENT PROJECTS

Full-Stack Web & Mobile Application

Flutter · React.js · FastAPI · Supabase · Firebase · Stripe Connect · Google Cloud Run · Codemagic CI/CD

- Built a cross-platform iOS & Android app in Flutter and a React.js web app, both on the same FastAPI backend.
- Implemented biometric login (Face ID / Touch ID) with secure JWT session handling and flutter_secure_storage.
- Built the backend with Python/FastAPI — JWT auth, bcrypt password hashing, and AES-128-CBC encryption for sensitive user data (email, phone).
- Integrated Stripe Connect for payments and payouts, with role-based access control for different user types.
- Deployed to Google Cloud Run, used Firebase for real-time features, and Supabase (PostgreSQL) as the main database.
- Set up Codemagic CI/CD for automated mobile builds; added branded QR generation, international phone input, and persistent dark/light theming.

EDUCATION

Bachelor's Degree in Information Technology

ACLC College
